Andy Jacobson has written a book about a "science"™ about which few of us know are familiar. In a warm and accessible manner he introduces the basics of Hydroponics. In his Foreword he states, "Whilst expending my efforts on it for almost 30 years, I've been able to narrow down the science of hydroponics into a number of easy to follow and digestible steps. I even like to say that I've managed to transform this science into somewhat of an art form. After a great deal of encouragement from my agricultural friends and family, I'm compelled to share with you the proven step-by-step methods for creating and managing your own successful hydroponic system. With this, you will have the tools needed to grow a selection of herbs, vegetables, and flowers at home - without the use of any soil." Though for the beginner reading the entire book is essential, for the curious Andy cover the following subjects: What Is Hydroponics?, Choosing a Hydroponic Medium, Types of Hydroponic Systems, Plant Nutrition " Learning and Selecting, Your Perfect Lighting Solution, The Growing Process, Creating Your Own Hydroponic System, and Pest Prevention and Troubleshooting. Mixing his written passages with diagrams and illustrations makes the book easily accessible and a very fine start in learning the art of Hydroponics, Grady Harp, February 16
